

Organization: CS+Social Good

Mission Statement:

Striving towards making technology that is both environmentally and socially safe and will change the world for the better.

PART TWO:

I chose this company because I used to be a part of the club here at UD and I stand for what they do. As for the mission statement, I used the word "striving" to exemplify that this goal is ongoing and it shows that they are working their hardest to accomplish it. Explaining that the technology they make is environmentally and socially safe is crucial because that is the main focus of what they do. Without stating this, we are just saying they make random technology (and why would anyone care). The same goes for the last part of this mission statement (and will change the world for the better).
